## Rules for writing mathematics, unit symbols, unit names, and expressing quantities

|  |  |  |  |  |  |  |  |  |  |  | ect | Not | rect |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Mathematical constants and explicitly defined functions must be in roman |  |  |  |  |  |  |  |  | $\mathrm{e}^{\text {j2 }}$ | $\sin x$ | $e^{j 2 \pi f t}$ | $\sin x$ |
|  | Variables must be in italic |  |  |  |  |  |  |  |  |  | $=x^{2}$ |  | $\mathrm{x}^{2}$ |
|  | Vectors and matrices are usually in bold italic, lowercase and uppercase resp. (ex: $\boldsymbol{z}, \boldsymbol{x}, \boldsymbol{y}$ are vectors, $\boldsymbol{A}$ a matrix, $\beta$ a scalar) |  |  |  |  |  |  |  |  | $z=$ | $+\beta y$ | $z=A$ | $+\beta y$ |
|  | Symbols used as subscripts and superscripts are in roman if they are descriptive (ex: Bolzmann constant, $n$th sample of the sequence $x$ ) |  |  |  |  |  |  |  |  |  |  |  |  |
|  | The multiplication of numbers should be denoted with $\times$, not - |  |  |  |  |  |  |  |  |  | $\times 3$ |  | 3 |
|  | The multiplication or division of variables should be denoted using one of the following methods : $a b, a b, a \cdot b, a \times b, a / b, \frac{a}{b}, a b^{-1}$ |  |  |  |  |  |  |  |  |  |  |  |  |
|  | A dash must not be used to denote a minus sign |  |  |  |  |  |  |  |  |  | $=-2$ | 5-7 | $=-2$ |
|  | Unit symbols must be in roman |  |  |  |  |  |  |  |  |  | dB |  | $d B$ |
|  | Unit symbols are mathematical entities, not abbreviations, thus : <br> - They are not followed by a period, except at the end of a sentence <br> - We must not use the plural <br> - We must not mix unit symbols and unit names within one expression |  |  |  |  |  |  |  |  |  | $\begin{aligned} & \min \\ & \min \\ & N / \mathrm{m}^{2} \end{aligned}$ | $\begin{array}{r} 13 \mathrm{n} \\ 17 \mathrm{n} \\ 19 \text { watt } \end{array}$ | min. <br> mins <br> s per m |
|  | Multiplication of unit symbols must be indicated by a space or - |  |  |  |  |  |  |  |  | W s | r W $\cdot \mathrm{s}$ |  | S |
|  | Division of unit symbols must be indicated by -, / or negative exponents Brackets must be used to remove ambiguities when several / are used |  |  |  |  |  |  |  |  |  | bit/s <br> /h)/Hz |  | $\begin{aligned} & \text { bps } \\ & \text { h/Hz } \end{aligned}$ |
|  | It is not permissible to use abbreviations for unit symbols. The use of the correct symbols for SI units is mandatory |  |  |  |  |  |  |  |  | $\begin{aligned} & \hline 31 \mathrm{~s} \\ & 41 \mathrm{~h} \\ & 47 \mathrm{~g} \end{aligned}$ | $\begin{gathered} 37 \mathrm{~min} \\ 43 \mathrm{~K} \\ 53^{\circ} \end{gathered}$ | $\begin{aligned} & \hline 31 \mathrm{sec} \\ & 41 \mathrm{hr} \\ & 47 \mathrm{gr} \end{aligned}$ | $\begin{gathered} \hline 37 \mathrm{mn} \\ 43^{\circ} \mathrm{K} \\ 53 \mathrm{deg} \end{gathered}$ |
|  | Unit names must be in roman, and they are treated like ordinary nouns |  |  |  |  |  |  |  |  | 59 | conds | 59 se | conds |
|  | Unit names begins with a lower-case letter, even for units named after someone |  |  |  |  |  |  |  |  |  | watts | 61 W | Vatts |
|  | When a prefix is used, no space or hyphen is used between the prefix and the unit name, they form a single word |  |  |  |  |  |  |  |  | 67 m | llivolts | 67 mil | i-volts |
|  | There is always a non-breaking space between a number and a unit symbol. The only exceptions are the degree, minute, and second for plane angle ( ${ }^{\circ}$, ', and ") |  |  |  |  |  |  |  |  |  | $\begin{aligned} & \mathrm{MHz} \\ & 3^{\circ} \mathrm{C} \\ & 9^{\circ} \end{aligned}$ |  | $\mathrm{MHz}$ $3^{\circ} \mathrm{C}$ $9^{\circ}$ |
|  | When the value of a quantity is used as an adjective, there is a (non-breaking) space between the numerical value and the unit symbol. |  |  |  |  |  |  |  |  | a 83 | gain | a 83-d | B gain |
|  | The decimal marker shall be either the point or the comma. The choice depends on the context |  |  |  |  |  |  |  |  |  | $\begin{aligned} & \text { (EN) } \\ & \text { (FR) } \end{aligned}$ | 89,97 89.97 | $\begin{aligned} & 7 \text { (EN) } \\ & 7 \text { (FR) } \end{aligned}$ |
|  | For numbers with many digits : <br> - The digits may be divided into groups of three by a thin (non-breaking) space <br> - Neither dots nor commas are inserted in the spaces between groups of three <br> - With four digits, it is customary not to use a space to isolate a single digit |  |  |  |  |  |  |  |  |  | $\begin{aligned} & 03107 \\ & 009 \end{aligned}$ |  | $\begin{aligned} & 03,107 \\ & 09 \end{aligned}$ |
|  | There is always a (non-breaking) space between a number and the symbol \% |  |  |  |  |  |  |  |  |  | 3 \% |  | \% |
| $$ | Prefix symbols must be in roman, and attached to the unit symbols |  |  |  |  |  |  |  |  |  | km |  | km |
|  | It is not permissible to use a prefix symbol different than the SI prefix symbols |  |  |  |  |  |  |  |  |  | $\begin{aligned} & \mathrm{kHz} \\ & 7 \mu \mathrm{~s} \end{aligned}$ |  | $\mathrm{KHz}$ <br> us |
|  | The SI prefixes refer strictly to powers of 10 . <br> They must not be used to indicate powers of 2. The IEC has adopted prefixes for binary powers in the international standard IEC 60027-2:2005 |  |  |  |  |  |  |  |  | $\begin{aligned} & 1 \text { kbit }=1000 \text { bits } \\ & 1 \text { Kibit }=1024 \text { bits } \end{aligned}$ |  | 1 kbit = 1024 bits |  |
|  | Factor | $10^{3}$ | $10^{6}$ | $10^{9}$ | $10^{12}$ | $10^{15}$ | $10^{18}$ | $2^{10}$ | $2^{20}$ | $2^{30}$ | $2^{40}$ | $2^{50}$ | $2^{60}$ |
|  | Name | kilo | mega | giga | tera | peta | exa | kibi | mebi | gebi | tebi | pebi | exbi |
|  | Symbol | k | M | G | T | P | E | Ki | Mi | Gi | Ti | Pi | Ei |
